

## CERTIFICATE OF CALIBRATION

### Standard Reference Source

**SRS Number:** 113752

**Source Description:** 5 mL Liquid in Flame Sealed Ampoule

**Product Code:** 8125

**Customer:** LLNS/LLNL For the U.S. DOE/NNSA

**P.O. Number:** B636725, Item 1

This standard radionuclide source was prepared gravimetrically from a master solution calibrated with an ionization chamber. The ionization chamber was calibrated by the National Physical Laboratory (NPL), Teddington, U.K., and is traceable to national standards. Radionuclide calibration and purity were checked by germanium gamma-ray spectrometry, liquid scintillation counting, and/or alpha spectrometry, as applicable. The nuclear decay rate and reference date for this source are given below. Eckert & Ziegler Analytics (EZA) maintains traceability to the National Institute of Standards and Technology (NIST) through a Measurements Assurance Program as described in USNRC Regulatory Guide 4.15, Revision 2, July 2007, and compliance with ANSI N42.22-1995, "Traceability of Radioactive Sources to NIST."
